## Safety System Change

As part of the changes brought about by Catholic Church Insurance (CCI) no longer managing claims / general insurance and the formation of Catholic Safety & Injury Management (CSaIM) to administer safety, claims and injury management, we have reviewed our Safety and Injury Management Systems.

Over the last six (6) months, CSaIM has introduced an injury management / claims system called Solv. This system has had no impact on the broader community. However, Solv requires a safety system that has the functionality to interact with. This system is Donesafe.

Initially, three (3) modules will be implemented: Incidents, Hazard Reporting and Audit (Workplace Inspections, Procedure Verification, Traffic, Plant, Work Environment Checklists). These modules can be accessed via computer, phone or tablet. Donesafe also can be linked to Complispace.

In the coming months, training for all workers will be scheduled. Administration training for those who are required to investigate and report site incidents and hazards will also be scheduled and conducted.

Further information will be provided over the next few months.

If you have any queries, please contact me via email [dnation@csaim.org.au](mailto:dnation@csaim.org.au) or phone 0417 534 020.

Regards

**Debbie Nation**
